# TRAKMATS

When You've Got to Get Through

TRAKMATS are made from 100% recycled high density 1.27cm thick polyethylene plastic. Cylinders on both sides are a proven design for generating gripping action in all kinds of conditions. The open space between cylinders creates the necessary pathways to release mud and debris from the traction area.

The typical truck tyre is in contact with at least 36 cylinders at any one time. That's more than sufficient load support and gripping power. All cylinders are paired with an identical cylinder on the reverse providing the necessary traction between mat and ground. No more spin outs. TRAKMATS work equally well in sand and snow conditions and are unaffected by heat or cold.

## APPLICATIONS:

- Special events and open air concerts
- Resorts and parks
- Construction, building, movie and TV production sites
- Temporary roads and parking lots
- Water well drill sites
- Golf courses, cemeteries and lawns
- Railway contracts
- Landscape creation and maintenance and more...

## SPECIFICATIONS:

Size	1.13m x 2.44m
Weight	33kgs
Thickness	13mm
Surface Type	Traction on both sides or traction one side & smooth one side
Material	100% Re-cycled polyethylene
Durability	5-7 years and is UV protected
Hand Cutouts	Yes. For safe and convenient way of lifting mats
Splinters	No. Trakmats won't break or tear
Easy Cleaning	Yes. Hose down with water
